Operations Binder

Summary: Purpose A high-level operating view of how Receiving, Inventory, Fulfillment, Transportation, and Safety work as one system across Montana and Idaho.

Start Here

- Operating Model — what each department owns and how work moves
- Shared Operating Standards — standards that apply across departments
- Department Standards Snapshot — high-level department scorecard
- Cross-Department Workflows — end-to-end Mermaid workflows
- Operating Cadence and Escalation — daily, weekly, and monthly controls
- Doyles Sheehan Operational Source Index — active and historical source map

Department Binders

- Receiving
- Inventory
- Fulfillment
- Transportation
- Safety

Important: Document control This binder summarizes operational controls. Detailed approved policies, the Employee Handbook, the current Safety Manual, food-safety plans, and regulatory programs remain controlling when they are more specific.

Operating Model

Department Purpose and Control Point

Department	Primary purpose	Control point	Required handoff
Receiving	Accept, inspect, document, and put away inbound product	Product is accepted or refused correctly and entered accurately	Clean, documented inventory becomes available to Inventory and Fulfillment
Inventory	Maintain physical and system inventory truth	Locations, quantities, dates, adjustments, returns, and dispositions are controlled	Reliable inventory information and resolved exceptions support all other departments
Fulfillment	Convert customer orders into accurate, stable, documented loads	The correct product and quantity are picked, scanned, invoiced, and staged	Verified route freight is transferred to Transportation
Transportation	Deliver the verified load safely and document delivery completion	Vehicle, load, delivery, signature, discrepancy, and return records are complete	Delivery outcomes and exceptions return to the office, Inventory, and Fulfillment
Safety	Prevent harm and verify compliance across every operation	Hazards, training, incidents, and corrective actions are identified and closed	Safety requirements are embedded in every department's standard work

End-to-End Ownership

- Receiving owns normal inbound processing and dock acceptance. Inventory supports exceptions, audits, and product-integrity questions.
- Inventory owns inventory accuracy, count research, location control, adjustment controls, product integrity, returns, and damage disposition according to assigned roles.
- Fulfillment owns order execution from release through pick, scan, invoice, staging, and load preparation.
- Transportation owns the load after verified physical handoff and owns delivery documentation and field exceptions.
- Safety is shared by every employee; managers own implementation, training, follow-up, and accountability within their departments.

Operating Principle

Accuracy, food safety, employee safety, legal compliance, and customer protection take priority over speed. Employees are expected to stop and escalate when a control cannot be completed or verified.

Shared Operating Standards

These standards apply to every operational department.

People and Conduct

- Work with integrity, respect, urgency, attention to detail, clear communication, and follow-through.
- Treat coworkers and internal departments as customers of the process.
- Report concerns without retaliation and use the established management or HR escalation path.

Safety

- Stop work when a condition, vehicle, load, product, location, or piece of equipment is unsafe.
- Report injuries, incidents, near misses, hazards, and damaged equipment immediately.
- Only trained and authorized employees may operate powered equipment or perform controlled tasks.
- Use required PPE and keep aisles, exits, docks, work areas, and emergency equipment clear.

Process Control

- Follow the approved SOP and complete every required scan, count, inspection, signature, and system transaction.
- Do not guess, bypass a control, backdate a record, or use speed as a reason to skip verification.
- Isolate questionable product or work and escalate before it moves downstream.
- Use documented handoffs so the receiving department knows what was completed, what remains open, and who owns the exception.

Product and Inventory Integrity

- Protect traceability and rotation through correct scans, locations, dates, and FIFO/FEFO practices applicable to the product.
- Segregate damaged, returned, held, quarantined, or out-of-date product from saleable inventory.
- Inventory adjustments require documented research and the assigned approval.

Management Control

- Review standards with employees during onboarding and when procedures change.
- Investigate recurring or material failures for root cause and assign corrective action.
- Use documented, objective measures for performance and process improvement.

- Review this binder whenever operations, systems, laws, or approved policies change.

Department Standards Snapshot

Department	Non-negotiable controls	Existing documented target or timing	Detail
Receiving	Chock before trailer entry; inspect and document; temperature control; same-day OSD communication; scan check-in and put-away	TCS at or below 41°F; frozen at or below 0°F; receiving accuracy target currently documented at 98%	Receiving Standards
Inventory	Blind count; independent verification; research before adjustment; approval separation; date/location control; documented disposition	Count-to-adjustment resolution no later than two weeks; KPI targets still require final approval	Inventory Standards
Fulfillment	No scan = no pick; RF verification before shorts; stable totes; controlled-goods documentation; invoice only after completed upload	Order accuracy target currently documented at 99%; piece-pick tote limit 40 lb; tax-stamp coverage 66%	Fulfillment Standards
Transportation	Pre-use inspection; verified load handoff; delivery count/signature; delivery evidence; prompt exception reporting	Customer discrepancies reported within 24 hours in the archived MT/ID procedure; current KPI targets require approval	Transportation Standards
Safety	Immediate reporting; stop unsafe work; trained/authorized equipment use; PPE; investigation and corrective action	Training cadence and current scorecard targets require confirmation against current policy	Safety Standards

Warning: Target control A number is not treated as an approved target unless it already appears in a current binder source. Unapproved metrics are listed as “target pending” rather than guessed.

Cross-Department Workflows

Product-to-Customer Flow

Product-to-Customer Flow

Receiving: inspect and accept

Next: Put-away: scan and rotate

Put-away: scan and rotate

Next: Inventory: maintain truth

Inventory: maintain truth

Next: Fulfillment: pick and verify

Fulfillment: pick and verify

Next: Transportation: deliver and document

Transportation: deliver and document

Next: Delivery exception?

Delivery exception?

No: Close delivery; Yes: Document and route for resolution

Close delivery

Document and route for resolution

Next: Inventory: maintain truth

Exception Control

Investigate cause

Next: Assign corrective action

Assign corrective action

Next: Verify effectiveness and close

Verify effectiveness and close

Operating Cadence and Escalation

Daily

- Confirm staffing, volume, route or inbound priorities, safety concerns, and known exceptions.
- Review incomplete handoffs: unreceived product, not-put-away product, shorts, no-locations, held product, unclosed loads, returns, and incidents.
- Assign an owner and due time to material exceptions.

Weekly

- Review department scorecards and recurring exceptions.
- Review open cycle-count variances, deductions, damages, returns, customer discrepancies, and corrective actions.
- Confirm training or qualification gaps and upcoming compliance deadlines.
- Compare staffing and labor use with operational volume using the approved department method.

Monthly

- Review trends across both warehouses and identify location-specific variation.
- Complete a deeper inventory, labor, accuracy, safety, and customer-service review.
- Verify that SOP, form, system, and ownership changes are reflected in the binder.
- Select a limited number of corrective actions and verify completion.

Escalation Standard

1. Protect people, product, customers, and records.
2. Stop the affected process when a required control cannot be completed.
3. Notify the process owner or on-duty manager.
4. Record the exception, evidence, immediate containment, owner, and due time.
5. Escalate unresolved cross-department issues to the Director of Operations and Safety.
6. Close only after the correction and downstream communication are verified.

Doyles Sheehan Operational Source Index

This index separates active working material from archived references. An archived source can inform a rewrite, but it is not automatically current policy.

Active Binder Sources

Receiving

- Receiving & Put-Away Binder
- Doyles Sheehan Receiving Policies & Standards
- Standards
- Department Outline
- Frontline Document
- Receiving Flowchart

Fulfillment

- Policies

Archived References Requiring Currency Review

- Doyles Sheehan Safety Policy Manual 2019 (not supplied) — historical safety source; review ownership, contacts, citations, and requirements before reissuing
- Driver Training Dashboard (not supplied) — high-level archived training hub
- Delivery Discrepancy Procedures MT (not supplied) — useful delivery-control source
- Delivery Discrepancy Procedures ID (not supplied) — incomplete contact fields; do not publish without correction
- IFTA Process Transportation (not supplied) — archived administrative process
- Cycle-Count SOP (not supplied) — compare with active inventory SOP before use
- Table Of Contents (not supplied) — legacy fulfillment manual index

Source-Control Rules

- Current approved policy outranks a binder summary.
- Active working notes must be approved before they are labeled policy.
- Archived imports are evidence and history, not automatic authority.
- Missing owners, thresholds, contacts, or targets remain visibly unapproved until confirmed.
