

Policy-Conflict Review

12 source review cases | Decision worksheet

This review compares supplied company documents. It does not validate their legal, food-safety, or regulatory correctness and does not select a controlling rule. Cases distinguish direct differences, apparent scope conflicts, approval questions, and missing definitions.

Review sequence

For each case, identify the current controlling source, confirm facility applicability, record the decision/version, and update all affected binder and diagram references. The decision fields are blank for the authorized reviewer.

Cases

Case	Area / type	Review question
C01	Receiving Direct threshold mismatch	TCS screen and acceptance boundaries
C02	Inventory Approval-status conflict	ABC variance tolerances
C03	Inventory Schedule / scope reconciliation	Generic ABC schedule versus warehouse/category schedule
C04	Inventory Apparent internal schedule conflict	WH2 stamp count timing
C05	Inventory Working versus legacy ownership	Named count and adjustment assignments
C06	Inventory Approval-authority mismatch	Supervisor versus manager adjustment approval
C07	Receiving Target approval / definition gap	98% receiving accuracy and its calculation
C08	Fulfillment Target approval gap	99% order accuracy at both sites
C09	Fulfillment Method and target approval gap	Labor efficiency and overtime accountability
C10	Transportation Archived rule presented as current	24-hour customer-discrepancy reporting
C11	Safety Historical cadence requires confirmation	Safety training and committee cadence
C12	Receiving Definition / controlling-source gap	Short-date provisional acceptance limit

TCS screen and acceptance boundaries

Direct threshold mismatch

Source statement A	Source statement B
The detailed diagram screens cooler surface temperature at $\leq 40^{\circ}\text{F}$ and labels temperature abuse as $>41^{\circ}\text{F}$. The policy defines a refrigerated safe zone at or below 40°F and a danger zone beginning at 41°F; its receiving steps trigger probing above 41°F. d45 Receiving/Receiving Flowchart.md d39 Receiving/4. Doyles Sheehan Receiving Policies & Standards.md	The Receiving Standards Register, Operations snapshot, and draw.io Receiving card state TCS at or below 41°F. The register explicitly requires alignment of detailed flowchart decision labels. d31 Receiving/03 Receiving Standards Register.md d24 Operations/03 Department Standards Snapshot.md drawio Operations Flowchart.drawio

Why it needs review

A reading of 41°F is described differently depending on the source. Surface screening, core confirmation, and release decisions also need separate definitions.

Decision required

Which current approved temperature policy governs each measurement and product class? Confirm surface-screen trigger, probe trigger, core acceptance boundary, and disposition authority; then align all labels.

Training flag

Discuss temperature checks and exception escalation, but leave disputed numeric acceptance criteria pending owner review.

Owner: _____ Facility / scope: _____
 Controlling source / revision: _____
 Decision and rationale: _____

 Approval / date: _____
 Affected documents updated / verified: _____

ABC variance tolerances

Approval-status conflict

Source statement A	Source statement B
Cycle Count Standards lists A +/-0.5%, B +/-1%, C +/-2%. The draw.io Inventory card presents the same percentages as variance tolerance gates.	The Inventory Standards Register says generic ABC frequencies and tolerance percentages need operational approval before they are treated as current rules.
d19 Inventory/Cycle Count Standards.md drawio Operations Flowchart.drawio	d16 Inventory/03 Inventory Standards Register.md

Why it needs review

Training could mistakenly promote a generic tolerance to a current approved adjustment gate.

Decision required

Approve or replace the tolerances, define the variance calculation and classification, and identify the controlling version for each facility.

Training flag

Train blind count, independent verification, documentation, and escalation; do not approve a numerical tolerance through checklist sign-off.

Owner: _____ Facility / scope: _____
 Controlling source / revision: _____
 Decision and rationale: _____

 Approval / date: _____
 Affected documents updated / verified: _____

Generic ABC schedule versus warehouse/category schedule

Schedule / scope reconciliation

Source statement A	Source statement B
Cycle Count Standards says A items monthly or quarterly, B semi-annually, C annually, with fast movers prioritized. d19 Inventory/Cycle Count Standards.md	The cycle-count SOP has weekday schedules for WH1/WH2, quarterlies, cigarettes, B/BN sections, rolled chew, Zyn, and stamps. The register requires completion of an approved daily/weekly/monthly/quarterly schedule; the index calls for publication of an approved warehouse/category schedule. d20 Inventory/Cycle Counting Standard Operating Procedure.md d16 Inventory/03 Inventory Standards Register.md d18 Inventory/05 Inventory SOP Forms and Training Index.md

Why it needs review

The category-specific schedule and ABC schedule may coexist, but their precedence and coverage are not documented. WH1/WH2 cannot be silently equated to MT/ID.

Decision required

Publish the controlling calendar by facility, warehouse, category, and ABC class. Resolve overlaps and explicitly map warehouse names.

Training flag

Ask the trainer to identify the approved calendar. Leave frequency authorization pending.

Owner: _____ Facility / scope: _____

Controlling source / revision: _____

Decision and rationale: _____

Approval / date: _____

Affected documents updated / verified: _____

WH2 stamp count timing

Apparent internal schedule conflict

Source statement A	Source statement B
Section 4, Warehouse 2 schedule: Friday is Cigarettes and Stamps. d20 Inventory/Cycle Counting Standard Operating Procedure.md	Section 5, Stamp Counting Frequency: WH2 monthly counts required; WH1 weekly counts required. d20 Inventory/Cycle Counting Standard Operating Procedure.md

Why it needs review

The Friday line may describe the weekday for a monthly count, but it can also be read as a weekly requirement.

Decision required

Confirm whether WH2 stamps are counted every Friday or on a designated monthly Friday. Publish exceptions and distinguish cigarette counts from stamp counts.

Training flag

Leave WH2 stamp frequency unapproved; train use of the confirmed calendar.

Owner: _____ Facility / scope: _____
 Controlling source / revision: _____
 Decision and rationale: _____

 Approval / date: _____
 Affected documents updated / verified: _____

Named count and adjustment assignments

Working versus legacy ownership

Source statement A	Source statement B
The SOP names WH2 Jessica for counts and Jackie for adjustments; WH1 Mitch for counts and Mitch/Roudy for adjustments, with additional stamp assignments. d20 Inventory/Cycle Counting Standard Operating Procedure.md	The working ownership model lists Inventory Auditor Mitch/Shelly and Inventory Manager Roudy/Jacque, separates preparation from approval, and says it needs approval before final issue. The register flags older names and spelling variations. d15 Inventory/02 Inventory Ownership and Handoffs.md d16 Inventory/03 Inventory Standards Register.md

Why it needs review

Legacy assignments and an unapproved working model do not establish a current authority roster. Name similarity does not prove identity or warehouse equivalence.

Decision required

Approve role ownership and authority by facility, verify names and warehouse mapping, and update the controlled SOP and roster together.

Training flag

Assess understanding of role separation; obtain current names from an approved roster before authorization.

Owner: _____ Facility / scope: _____
 Controlling source / revision: _____
 Decision and rationale: _____

 Approval / date: _____
 Affected documents updated / verified: _____

Supervisor versus manager adjustment approval

Approval-authority mismatch

Source statement A	Source statement B
Cycle Count Standards describes supervisor approval above tolerance and authorization based on variance value: supervisor for minor, manager for major. d19 Inventory/Cycle Count Standards.md	The working ownership model assigns review and approval to the Inventory Manager. Cycle Count to Closure includes Manager review and approval. The register requires preparation and approval to be separated for every adjustment. d15 Inventory/02 Inventory Ownership and Handoffs.md d17 Inventory/04 Inventory Workflow Maps.md d16 Inventory/03 Inventory Standards Register.md

Why it needs review

The sources do not supply value limits or an approved delegation matrix, so permitted approvers cannot be assumed.

Decision required

Publish the adjustment authority matrix, value limits, delegation rules, reason codes, and separation requirements.

Training flag

Require identification of the approved approver; leave delegation and dollar limits pending.

Owner: _____ Facility / scope: _____
 Controlling source / revision: _____
 Decision and rationale: _____

 Approval / date: _____
 Affected documents updated / verified: _____

98% receiving accuracy and its calculation

Target approval / definition gap

Source statement A	Source statement B
Standards specifies quantities matching POs at 98%; the outline describes a percentage of shipments without errors/discrepancies; the frontline document describes a 98% PO-to-receipt match accuracy, and draw.io calls it a target. d40 Receiving/5.Standards.md d41 Receiving/6.Department Outline.md d42 Receiving/7. Frontline Document.md drawio Operations Flowchart.drawio	The register cites 98% but explicitly asks whether the target remains approved for both locations. d31 Receiving/03 Receiving Standards Register.md

Why it needs review

Shipment-level and quantity-match descriptions do not establish the same denominator. Current approval and calculation remain unverified.

Decision required

Confirm the target by facility and define numerator, denominator, treatment of exceptions, reporting period, and system of record.

Training flag

Train discrepancy capture without presenting an unconfirmed scorecard calculation as approved.

Owner: _____ Facility / scope: _____
 Controlling source / revision: _____
 Decision and rationale: _____

 Approval / date: _____
 Affected documents updated / verified: _____

99% order accuracy at both sites

Target approval gap

Source statement A	Source statement B
Fulfillment Department Standards says quantities picked versus the order must be 99% accurate; the draw.io Fulfillment card uses a 99% accuracy core standard. d10 Fulfillment/5. Fulfillment Department Standards.md drawio Operations Flowchart.drawio	The register cites 99% and asks whether it remains the approved target at both sites. d03 Fulfillment/03 Fulfillment Standards Register.md

Why it needs review

The number is documented, but the register retains a current approval question. This is not evidence of a different numeric target.

Decision required

Confirm site applicability, calculation, current approval, reporting period, and controlling document.

Training flag

Keep no scan = no pick and item/quantity verification as source-supported controls; leave target approval pending.

Owner: _____ Facility / scope: _____
 Controlling source / revision: _____
 Decision and rationale: _____

 Approval / date: _____
 Affected documents updated / verified: _____

Labor efficiency and overtime accountability

Method and target approval gap

Source statement A	Source statement B
Department Standards lists labor efficiency within 5% of site-specific standards and overtime below 10% of total hours. d10 Fulfillment/5. Fulfillment Department Standards.md	The register requires validation of labor normalization methodology before scorecard use and confirmation of the approved overtime target before accountability. d03 Fulfillment/03 Fulfillment Standards Register.md

Why it needs review

A numeric target without an approved volume normalization method can produce inconsistent comparisons.

Decision required

Approve the site-specific baseline, units, volume normalization, overtime denominator, exclusions, and target version.

Training flag

Do not use checklist results to certify compliance with unresolved productivity targets.

Owner: _____ Facility / scope: _____
 Controlling source / revision: _____
 Decision and rationale: _____

 Approval / date: _____
 Affected documents updated / verified: _____

24-hour customer-discrepancy reporting

Archived rule presented as current

Source statement A	Source statement B
The draw.io Transportation card presents a 24-Hour Office Loop to the Returns Specialist. drawio Operations Flowchart.drawio	The Transportation register and Operations snapshot identify 24 hours as coming from archived MT/ID procedures and require confirmation of current policy. The index calls for one approved MT/ID procedure and current contacts. d55 Transportation/03 Transportation Standards Register.md d24 Operations/03 Department Standards Snapshot.md d57 Transportation/05 Transportation SOP Forms and Training Index.md

Why it needs review

The map overview sounds definitive while the binder marks the timing and contacts for review.

Decision required

Confirm the current deadline, trigger time, office channel, receiving role, MT/ID contacts, and escalation if reporting fails.

Training flag

Train documenting and routing exceptions; confirm the active deadline and channel before operational sign-off.

Owner: _____ Facility / scope: _____
 Controlling source / revision: _____
 Decision and rationale: _____

 Approval / date: _____
 Affected documents updated / verified: _____

Safety training and committee cadence

Historical cadence requires confirmation

Source statement A	Source statement B
The Safety Standards Register reports that the archived 2019 manual describes monthly training and quarterly committee meetings.	The same register says those cadences must be confirmed before being labeled current. The index requires a current annual training matrix, committee calendar, and controlled manual.
d49 Safety/03 Safety Standards Register.md	d49 Safety/03 Safety Standards Register.md d51 Safety/05 Safety SOP Forms and Training Index.md

Why it needs review

The archived manual itself was not supplied. Historical cadence is reported by the register, not independently verified here.

Decision required

Obtain the current controlled manual and confirm training and committee requirements, then issue the matrix/calendar.

Training flag

Assess source-supported hazard and incident workflow topics; do not assign a current refresher cadence from an absent archive.

Owner: _____ Facility / scope: _____
 Controlling source / revision: _____
 Decision and rationale: _____

 Approval / date: _____
 Affected documents updated / verified: _____

Short-date provisional acceptance limit

Definition / controlling-source gap

Source statement A	Source statement B
The policy allows provisional acceptance of short-dated items within 10% of the acceptable date range as defined by Purchasing policies; expired product is refused. It also says TCS must remain in the safe range. d39 Receiving/4. Doyles Sheehan Receiving Policies & Standards.md	The register limits provisional acceptance to documented criteria. The index lists a provisional acceptance record, but the supplied package has no separate Purchasing date-range policy or controlled record template. d31 Receiving/03 Receiving Standards Register.md d33 Receiving/05 Receiving SOP Forms and Training Index.md

Why it needs review

The percentage cannot be calculated consistently without the acceptable date range and product-specific minimums. This is a missing definition, not a competing percentage.

Decision required

Supply the controlling Purchasing date-range policy, product minimums, calculation examples, provisional record, and release authority.

Training flag

Train labeling, segregation, documentation, and buyer follow-up; leave calculation and release examples pending the controlling source.
