

Source-Based Training Checklists

16 documented workflows plus department training topics

Draft assessment worksheets. Use a reviewed, current SOP alongside these checklists. A diagram step supports a training topic but does not prove that a full approved task procedure, qualification program, or acceptance threshold is supplied.

Recording results

For each row: Discuss, Observe, and Confirm may be checked independently. Record initials, evidence, or the unresolved gap. A blank result does not mean passed. Assess decision nodes by tracing all labeled branches, including stop/refusal and loop-back paths. The worksheets do not establish a new process sequence or pass score.

Before operational sign-off

Record the facility, controlling SOP and revision, and trainer authorization. Resolve applicable policy-review flags first. If the controlling procedure, authority, or criterion is missing, leave sign-off pending and record a gap; checklist completion alone does not authorize independent work.

Known review flags

Receiving: C01 TCS screen and acceptance boundaries, C07 98% receiving accuracy and its calculation, C12 Short-date provisional acceptance limit

Inventory: C02 ABC variance tolerances, C03 Generic ABC schedule versus warehouse/category schedule, C04 WH2 stamp count timing, C05 Named count and adjustment assignments, C06 Supervisor versus manager adjustment approval

Fulfillment: C08 99% order accuracy at both sites, C09 Labor efficiency and overtime accountability

Transportation: C10 24-hour customer-discrepancy reporting

Safety: C11 Safety training and committee cadence
